

Pilar Lucas Bettini

Barcelona, Spain
English / Spanish

Professional Summary

Python-focused data and automation professional with 3+ years of experience building practical solutions in fast-paced environments. Strong background in Python, SQL, automation, reporting, and cross-functional problem-solving. Comfortable working with ambiguity, turning business needs into reliable systems, and delivering meaningful improvements quickly. Known for combining analytical thinking with a builder mindset, writing clean and maintainable code, and collaborating effectively with technical and non-technical teams.

Core Skills

- Python
- SQL
- Automation and scripting
- API integrations
- Data processing and reporting
- Process optimization
- Power BI / Tableau
- ETL workflows
- Cross-functional collaboration
- Problem-solving in fast-paced environments
- English and Spanish

Professional Experience

Amazon — Automation, Tech & Data / Supply Chain Operations

Feb 2025 /Now

- Built Python-based tools and automations to improve operational workflows, reporting, and monitoring.
- Used SQL extensively to extract, transform, and analyze large operational datasets.
- Worked with cross-functional stakeholders to solve operational problems through scalable data and automation solutions.

- Improved reporting reliability and process efficiency in a high-volume, fast-paced environment.
- Supported decision-making by translating complex operational data into actionable insights.

Data / BI / Automation Projects

Jan 2024 / Feb 2025

- Developed Python-based tools for extracting, generating, and comparing reports, improving reporting accuracy and reducing manual work.
- Built dashboards and reporting solutions in Power BI and Tableau for business monitoring and decision support.
- Created automation solutions that connected data workflows with business needs, improving efficiency across teams.
- Worked on internal tools and process improvements using Python, SQL, and analytics.

Full Stack Developer

Feb 2023 / Dec 2023 - Konecta BTO

- Worked on front-end and back-end development for a booking platform.
- Managed a MySQL database connected through APIs and supported data flows across the platform.
- Developed features using HTML, CSS, JavaScript, and React.
- Contributed to practical product improvements in a collaborative development environment.

Selected Achievements

- Built Python automation solutions that reduced repetitive manual work and improved reporting consistency.
- Combined technical execution with business understanding to deliver tools used in daily operations.
- Worked in demanding operational environments where speed, reliability, and ownership were essential.

Education

Advanced Certificate in Business Coding

May 2023 – December 2024 — Madrid, Spain

Focus: Data analysis, process optimization, and supply chain technologies.

Professional Developer Program

July 2021 – September 2022 — Buenos Aires, Argentina

Focus: Full-stack development, database management, and data-driven decision making.

Bachelor's Degree in Advertising

March 2017 – October 2021 — Universidad Siglo 21, Córdoba, Argentina

Additional Information

- 3+ years of professional experience
- Interested in Python development, automation, backend systems, and practical engineering challenges
- Comfortable learning new tools quickly and working with evolving requirements
- Open to using AI-assisted tools to improve development speed and quality
